

Case Study: Managed Review

Employing a data reduction strategy within a managed review solution for a product liability lawsuit, Cimplifi cut review volume by 80% and saved an estimated \$350,000 in costs.

Client Challenge

Our client, a prominent pharmaceutical company, faced a product liability lawsuit for one of its most profitable drugs. The initial collection set consisted of more than 2 TBs of data and one million documents.

Cimplifi Solution

Cimplifi employed a data reduction strategy –validated through random sampling –that reduced the review set to 200,000 documents, which were categorized by responsiveness and privilege status.

In three weeks, 15 experienced document review attorneys completed the review on time, saving an estimated \$350,000 in costs. The client continues to utilize the documented workflows and processes developed during the project lifecycle.
