

CI Lake

Scalable. Smart. Cost-Efficient. Future-Ready.

CI Lake is your next-generation data lake solution for legal operations—designed to unify, simplify, and supercharge the way you manage big data across your ecosystem. Whether you're preparing for review, leveraging AI, or preserving legacy data, CI Lake is your bridge to modern data management—at scale and at a smart cost.

CI Lake acts as a secure, scalable repository for legal and investigative data, creating a foundation for early case assessment, data reuse, cross-matter intelligence, and long-term enterprise knowledge retention.

A Smarter Path to Relativity aiR

CI Lake is ideal for corporations and law firms with massive datasets who need a place to store data that doesn't require the full horsepower of Relativity aiR today. With Azure-native storage, CI Lake enables seamless movement between Relativity environments—keeping your data accessible and actionable, while optimizing costs.

By storing legacy, inactive or cross-matter data in CI Lake, clients can:

Reduce costs while maintaining the ability to query data on-demand.

Search metadata and retain context, even if the workspace is not active.

Eliminate the operational risk of legacy cold storage options, which require time-consuming exports when deadlines arise.

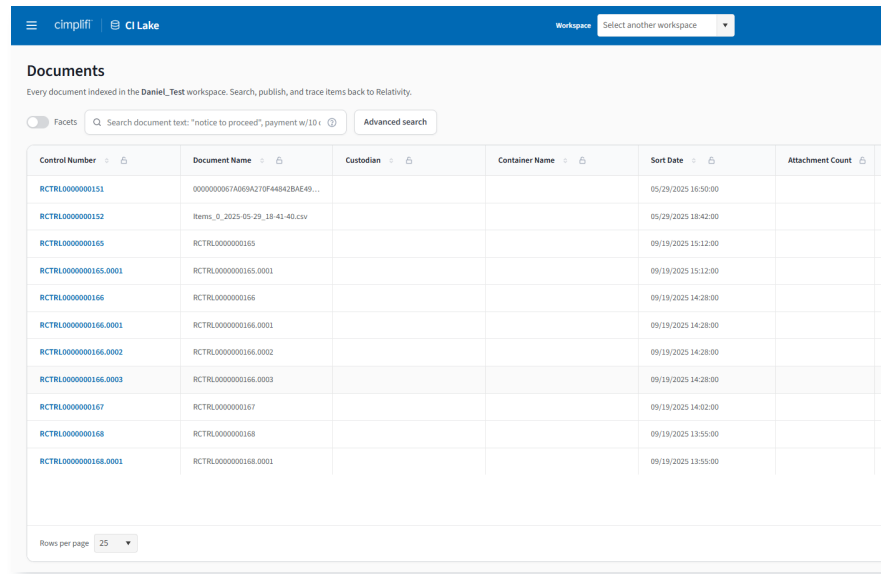

Enable matter-level intelligence across cases—especially valuable for corporate clients managing privilege and responsiveness consistently across matter types.

CI Lake gives you the freedom to move at your pace—maximizing value now.

What's a Data Lake?

A data lake is a centralized repository that lets you store structured data at scale. It's where your data lives long term at a lower cost—making it easier to search, analyze, and integrate with AI or downstream systems on demand.

The screenshot shows the Cimplifi CI Lake interface. At the top, there's a header with the Cimplifi logo and 'CI Lake'. Below the header, there's a 'Documents' section with a search bar and a table of documents. The table has columns for Control Number, Document Name, Custodian, Container Name, Sort Date, and Attachment Count. The table contains 10 rows of data.

Control Number	Document Name	Custodian	Container Name	Sort Date	Attachment Count

Why It Matters to You

Legal teams need a smart way to manage high-volume data. CI Lake eliminates data silos, reduces storage expense, and future-proofs your workflows for the age of AI. Key features include:

CODING REUSE

Create it once, use it everywhere. CI Lake enables code reuse across workspaces, driving consistency and saving valuable time.

STORAGE & SEARCH

Access massive volumes of data through cost-effective, scalable storage with built-in search that works seamlessly across your data lake.

AI INTEGRATIONS

Plug in your own large language models (LLMs) to analyze, summarize, and extract insights—making CI Lake the launchpad for your AI strategy.

BUILT FOR SCALE

No more boundaries. CI Lake is designed to handle the scale and complexity of modern legal and compliance workflows.

Whether you're preparing for review, leveraging advanced analytics, or building custom solutions—CI Lake is your foundation for what's next.

Build your legal data foundation with flexibility, scale, and intelligence, while accelerating your journey to Relativity aiR.
