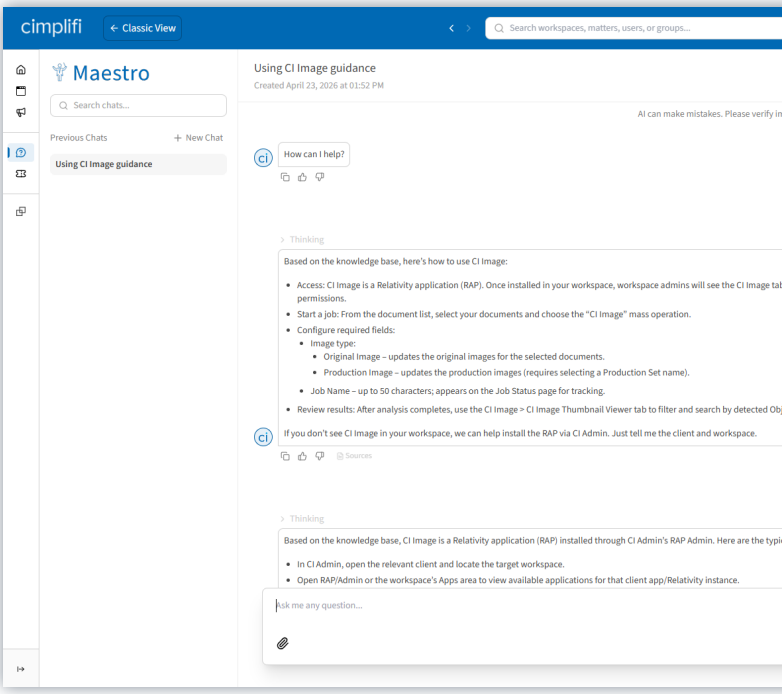
Introducing Maestro

A Centralized AI Orchestration Platform

Your Intelligent Guide to the Cimplifi Ecosystem

Maestro is an AI orchestration platform for navigating and activating the Cimplifi ecosystem. Embedded in the Cimplifi dashboard, it allows users to describe the result they need in natural language while Maestro coordinates the tools, data, and workflows required to deliver it.

Working alongside Relativity aiR, Maestro prepares data, intelligence, and reusable work product before information enters a Relativity workspace, helping teams build on prior work and technology investments.



Meet Maestro

Ask questions and analyze legal data using natural language and complete administrative tasks without searching documentation, submitting support requests, or manually coordinating tools. Maestro delivers contextual answers and helps users understand communications, timelines, topics, and key facts. Drag and drop data to receive insights and workflow recommendations, including potential search terms for an ESI protocol.

How Maestro Works

Maestro combines trusted documentation, curated Cimplifi knowledge, and live administrative APIs to deliver accurate guidance and execute workflows. For legal and investigative workflows, CI Lake, the Cimplifi data repository securely stores and analyzes data pre-Relativity, providing early insight for downstream legal processes and Relativity aiR workflows.

What you can do with Maestro:

- **Get trusted guidance:** Ask questions across Cimplifi, Relativity, and support resources.
- **Complete administrative tasks:** Create users and workspaces, assign permissions, and manage access using natural language.
- **Analyze legal data:** Explore communications, timelines, participants, topics, and potential search terms.
- **Activate the right tools:** Receive recommendations for Cimplifi Innovations and appropriate eDiscovery workflows.

Built for trust

- Uses controlled sources, including Cimplifi support and best-practice content and approved third-party documentation.
- Shows the sources behind each response.
- Keeps each user's conversations private.
- Respects existing role-based permissions and access control.
- Allows users to provide feedback that helps refine guidance and workflows.

Maestro helps teams reach outcomes faster without needing to master every tool in the Cimplifi ecosystem.

**Maestro complements Assist by extending insight to data not yet in a Relativity workspace. Full citation-linking to source documents is planned as CI Lake capabilities expand.*

Explore Maestro in the Cimplifi dashboard.

Ask a question. Activate a tool. Start a workflow.
